

OPPORTUNITIES

- *We can think of EV Fleets as a mobile power plant*
- *Predict the economics of scaling an EV fleet*
- *Enable utility companies to smooth peak power (Duck Curve)*

NEXT STEPS

- *Iterate predictive model using fleet data*
- *Conduct user research with San Francisco fleet managers*
- *Create a model that connects energy arbitrage and driving prediction*
- *Exploring how the utility can deploy this EV fleet battery to smooth demand*
